## **ABOUT THIS MANUAL**

#### **Purpose**

This manual describes the assembly, installation, operation and troubleshooting of this unit. Please read this manual carefully before installations and operations. Keep this manual for future reference.

### **Scope**

This manual provides safety and installation guidelines as well as information on tools and wiring.

## SAFETY INSTRUCTIONS

WARNING: This chapter contains important safety and operating instructions. Read and keep this manual for future reference.

- 1. Before using the unit, read all instructions and cautionary markings on the unit, the batteries and all appropriate sections of this manual.
- 2. **CAUTION** --To reduce risk of injury, charge only deep-cycle lead acid type rechargeable batteries. Other types of batteries may burst, causing personal injury and damage.
- 3. Do not disassemble the unit. Take it to a qualified service center when service or repair is required. Incorrect re-assembly may result in a risk of electric shock or fire.
- 4. To reduce risk of electric shock, disconnect all wirings before attempting any maintenance or cleaning. Turning off the unit will not reduce this risk.
- 5. **CAUTION** Only qualified personnel can install this device with battery.
- 6. **NEVER** charge a frozen battery.
- 7. For optimum operation of this inverter/charger, please follow required spec to select appropriate cable size. It's very important to correctly operate this inverter/charger.
- 8. Be very cautious when working with metal tools on or around batteries. A potential risk exists to drop a tool to spark or short circuit batteries or other electrical parts and could cause an explosion.
- 9. Please strictly follow installation procedure when you want to disconnect AC or DC terminals. Please refer to INSTALLATION section of this manual for the details.
- 10. Internal battery fuses are provided as over-current protection for the battery supply.
- 11. GROUNDING INSTRUCTIONS -This inverter/charger should be connected to a permanent grounded wiring system. Be sure to comply with local requirements and regulation to install this inverter.
- 12. NEVER cause AC output and DC input short circuited. Do NOT connect to the mains when DC input short circuits.
- 13. **Warning!!** Only qualified service persons are able to service this device. If errors still persist after following troubleshooting table, please send this inverter/charger back to local dealer or service center for maintenance.

## INTRODUCTION

This is a multi-function inverter/charger, combining functions of inverter, solar charger and battery charger to offer uninterruptible power support with portable size. Its comprehensive LCD display offers user-configurable and easy-accessible button operation such as battery charging current, AC/solar charger priority, and acceptable input voltage based on different applications.

#### **Features**

- Pure sine wave inverter
- Built-in 2 strings of MPPT solar charge controller
- Configurable input voltage range for home appliances and personal computers via LCD setting
- · Configurable battery charging current based on applications via LCD setting
- Configurable AC/Solar Charger priority via LCD setting
- Compatible to mains voltage or generator power
- Auto restart while AC is recovering
- Overload/ Over temperature/ short circuit protection
- Smart battery charger design for optimized battery performance
- Cold start function
- Optional SNMP card

### **Basic System Architecture**

The following illustration shows basic application for this inverter/charger. It also includes following devices to have a complete running system:

- · Generator or Utility.
- · Two PV modules

Consult with your system integrator for other possible system architectures depending on your requirements.

This inverter can power all kinds of appliances in home or office environment, including motor-type appliances such as tube light, fan, refrigerator and air conditioner.

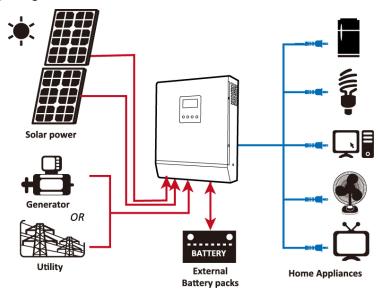

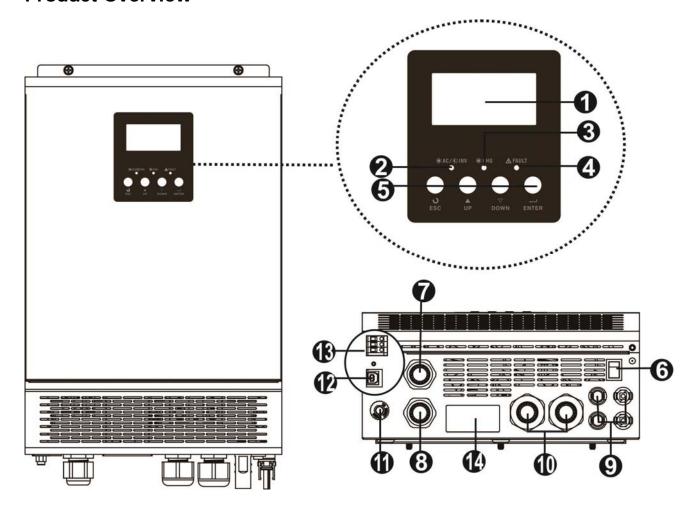

Figure 1 Hybrid Power System

## **Product Overview**

- 1. LCD display
- 2. Status indicator
- 3. Charging indicator
- 4. Fault indicator
- 5. Function buttons
- 6. Power on/off switch
- 7. AC input
- 8. AC output
- 9. PV input
- 10. Battery input
- 11. Circuit breaker
- 12. USB communication port
- 13. Dry contact
- 14. Intelligent slot (optional)

#### INSTALLATION

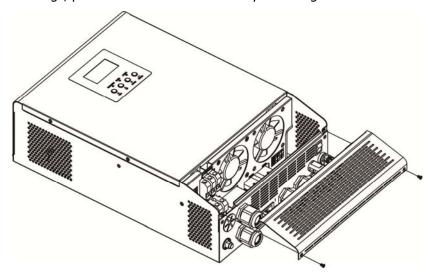

## **Unpacking and Inspection**

Before installation, please inspect the unit. Be sure that nothing inside the package is damaged. You should have received the following items inside of package:

- The unit x 1
- User manual x 1
- USB Communication cable x 1
- Software CD x 1

## **Preparation**

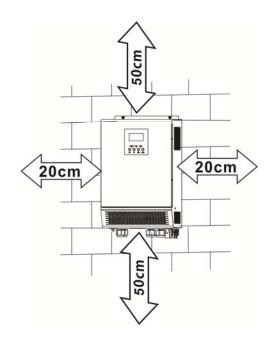

Before connecting all wirings, please take off bottom cover by removing two screws as shown below.

## **Mounting the Unit**

Consider the following points before selecting where to install:

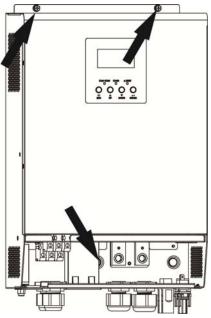

- Do not mount the inverter on flammable construction materials.
- Mount on a solid surface
- Install this inverter at eye level in order to allow the LCD display to be read at all times.
- For proper air circulation to dissipate heat, allow a clearance of approx. 20 cm to the side and approx. 50 cm above and below the unit.
- The ambient temperature should be between -20°C and 55°C to ensure optimal operation.
- The recommended installation position is to be adhered to the wall vertically.
- Be sure to keep other objects and surfaces as shown in the diagram to guarantee sufficient heat dissipation and to have enough space for removing wires.

 $\triangle$ 

SUITABLE FOR MOUNTING ON CONCRETE OR OTHER NON-COMBUSTIBLE SURFACE ONLY.

Install the unit by screwing three screws.

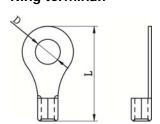

## **Battery Connection**

**CAUTION:** For safety operation and regulation compliance, it's requested to install a separate DC over-current protector or disconnect device between battery and inverter. It may not be requested to have a disconnect device in some applications, however, it's still requested to have over-current protection installed. Please refer to typical amperage in below table as required fuse or breaker size. **Ring terminal:** 

WARNING! All wiring must be performed by a qualified personnel.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for battery connection. To reduce risk of injury, please use the proper recommended cable and terminal size as below.

#### Recommended battery cable and terminal size:

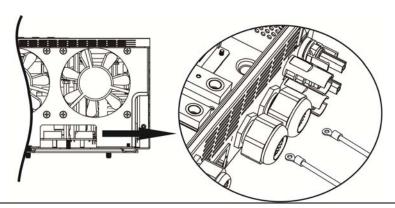

|            | Tymiaal             | Dottom.          | Cable Size |                     | Cable Size Ring Terminal |         | rminal          | Torque |      |     |         |  |        |        |       |
|------------|---------------------|------------------|------------|---------------------|--------------------------|---------|-----------------|--------|------|-----|---------|--|--------|--------|-------|
| Model      | Typical<br>Amperage | Battery capacity | AWG        | mm <sup>2</sup>     | Dimen                    | sions   | Torque<br>value |        |      |     |         |  |        |        |       |
|            | Amperage            | сарасну          | AWG mm²    | AWG MM <sup>2</sup> | AVVG Mm²                 | AWG mm- | AWG MI          | AWG    | AVVG | AWG | AWG MM- |  | D (mm) | L (mm) | value |
| 1.5KVA 12V | 100A                | 100AH            | 1 x 4AWG   | 22                  | 6.4                      | 33.2    |                 |        |      |     |         |  |        |        |       |
| 3KVA 24V   | 100A                | 200AH            | 2 x 8AWG   | 14                  | 6.4                      | 29.2    | 2~ 3 Nm         |        |      |     |         |  |        |        |       |
| 1.5KVA 48V | 25A                 | 100AH            | 1 x 12AWG  | 4                   | 6.4                      | 22.5    | 2~ 3 INIII      |        |      |     |         |  |        |        |       |
| 3KVA 48V   | 50A                 | 100AH            | 1 x 8AWG   | 8                   | 6.4                      | 23.8    |                 |        |      |     |         |  |        |        |       |

Please follow below steps to implement battery connection:

- 1. Assemble battery ring terminal based on recommended battery cable and terminal size.
- 2. Connect all battery packs as the unit is required. It's suggested to connect at least 100Ah capacity battery to the unit.

**NOTE**: Please only use sealed lead acid battery or sealed GEL/AGM lead-acid battery.

3. Insert the ring terminal of battery cable flatly into battery connector of inverter and make sure the bolts are tightened with torque of 2-3 Nm. Make sure polarity at both the battery and the inverter/charge is correctly connected and ring terminals are tightly screwed to the battery terminals.

 $\triangle$ 

**WARNING: Shock Hazard** 

Installation must be performed with care due to high battery voltage in series.

**CAUTION!!** Do not place anything between the flat part of the inverter terminal and the ring terminal. Otherwise, overheating may occur.

**CAUTION!!** Do not apply anti-oxidant substance on the terminals before terminals are connected tightly.

**CAUTION!!** Before making the final DC connection or closing DC breaker/disconnector, be sure positive (+) must be connected to positive (+) and negative (-) must be connected to negative (-).

### **AC Input/Output Connection**

**CAUTION!!** Before connecting to AC input power source, please install a **separate** AC breaker between inverter and AC input power source. This will ensure the inverter can be securely disconnected during maintenance and fully protected from over current of AC input. The recommended spec of AC breaker is 20A for 1.5KVA and 30A for 3KVA.

**CAUTION!!** There are two terminal blocks with "IN" and "OUT" markings. Please do NOT mis-connect input and output connectors.

WARNING! All wiring must be performed by a qualified personnel.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for AC input connection. To reduce risk of injury, please use the proper recommended cable size as below.

Suggested cable requirement for AC wires

| Madal  | Cab    | Torque Volue |              |
|--------|--------|--------------|--------------|
| Model  | AWG    | mm²          | Torque Value |
| 1.5KVA | 16 AWG | 1.5          | 0.5~ 0.6 Nm  |
| 3KVA   | 12 AWG | 4            | 1.2~ 1.6 Nm  |

Please follow below steps to implement AC input/output connection:

- 1. Before making AC input/output connection, be sure to open DC protector or disconnector first.
- 2. Remove insulation sleeve 10mm for six conductors. And shorten phase L and neutral conductor N 3 mm.

3. Insert AC input wires according to polarities indicated on terminal block and tighten the terminal screws. Be sure to connect PE protective conductor ( ) first.

Ground (yellow-green)

L→LINE (brown or black)

N→Neutral (blue)

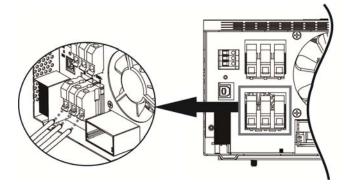

## <u>^</u>

#### **WARNING:**

Be sure that AC power source is disconnected before attempting to hardwire it to the unit.

4. Then, insert AC output wires according to polarities indicated on terminal block and tighten terminal screws. Be sure to connect PE protective conductor ( ) first.

→Ground (yellow-green) L→LINE (brown or black) N→Neutral (blue)

5. Insert AC input and AC output wires through cable gland and make sure the wires are securely connected.

**CAUTION: Important** 

Be sure to connect AC wires with correct polarity.

**CAUTION:** Appliances such as air conditioner are required at least 2~3 minutes to restart because it's required to have enough time to balance refrigerant gas inside of circuits. If a power shortage occurs and recovers in a short time, it will cause damage to your connected appliances. To prevent this kind of damage, please check manufacturer of air conditioner if it's equipped with time-delay function before installation. Otherwise, this inverter/charger will trig overload fault and cut off output to protect your appliance but sometimes it still causes internal damage to the air conditioner.

#### **PV Connection**

**CAUTION:** Before connecting to PV modules, please install **separately** a DC circuit breaker between inverter and PV modules.

**NOTE 1:** Please use 150VDC/50A circuit breaker.

**WARNING!** All wiring must be performed by a qualified personnel.

#### **PV Module Selection:**

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for PV module connection. To reduce risk of injury, please use the proper recommended cable size as below.

| Typical Amparaga | Cable Size |   |  |
|------------------|------------|---|--|
| Typical Amperage | AWG mm²    |   |  |
| 40A              | 10AWG      | 6 |  |

When selecting proper PV modules, please be sure to consider below parameters:

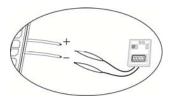

1. Open circuit Voltage (Voc) of PV modules not exceeds max. PV array open circuit voltage of inverter.

2. Open circuit Voltage (Voc) of PV modules should be higher than min. battery voltage.

| INVERTER MODEL                     | 12Vdc    | 24Vdc    | 48Vdc    |
|------------------------------------|----------|----------|----------|
| Max. PV Array Open Circuit Voltage | 100Vdc   |          |          |
| PV Array MPPT Voltage Range        | 15~80Vdc | 30~80Vdc | 60~90Vdc |

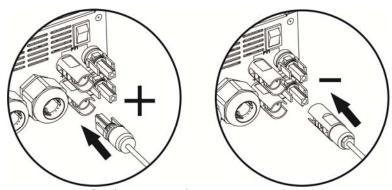

Please follow below steps to implement PV module connection:

1. Check the input voltage of PV array modules. The maximum acceptable input voltage of the inverter is 100VDC. This system is only applied with two strings of PV array. Please make sure that the maximum current load of each PV input connector is 40A.

**CAUTION:** Exceeding the maximum input voltage can destroy the unit!! Check the system before wire connection.

- 2. Disconnect the circuit breaker and switch off the DC switch.
- 3. Check correct polarity of connection cable from PV modules and PV input connectors. Then, connect positive pole (+) of connection cable to positive pole (+) of PV input connector. Connect negative pole (-) of connection cable to negative pole (-) of PV input connector.

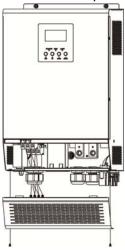

4. Make sure all PV connectors are firmly connected.

**CAUTION:** Never directly touch terminals of the inverter. It will cause lethal electric shock.

**CAUTION:** Do NOT touch the inverter to avoid electric shock. When PV modules are exposed to sunlight, it may generate DC voltage to the inverter.

## **Final Assembly**

After connecting all wirings, please put bottom cover back by screwing two screws as shown below.

#### **Communication Connection**

Please use supplied communication cable to connect to inverter and PC. Insert bundled CD into a computer and follow on-screen instruction to install the monitoring software. For the detailed software operation, please check user manual of software inside of CD.

## **Dry Contact Signal**

There is one dry contact (3A/250VAC) available on the rear panel. It could be used to deliver signal to external device when battery voltage reaches warning level.

| Unit Status |                           | Condi                       | Dry contact   | port: NC C NO |        |
|-------------|---------------------------|-----------------------------|---|---------------|--------|
|             |                           |                             |   | NC & C        | NO & C |
| Power Off   | Unit is off and           | no output is pow            | vered.  | Close         | Open   |

## **OPERATION**

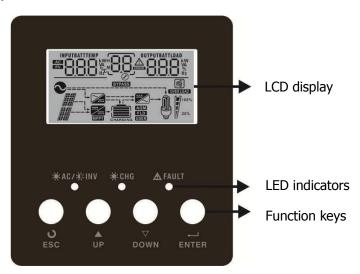

#### Power ON/OFF

Once the unit has been properly installed and the batteries are connected well, simply press On/Off switch (located on the button of the case) to turn on the unit.

## **Operation and Display Panel**

The operation and display panel, shown in below chart, is on the front panel of the inverter. It includes three indicators, four function keys and a LCD display, indicating the operating status and input/output power information.

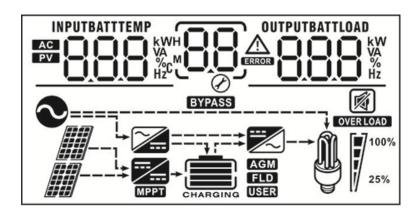

#### **LED Indicator**

| LED I                          | ndicator        |          | Messages  |

## **LCD Setting**

After pressing and holding ENTER button for 3 seconds, the unit will enter setting mode. Press "UP" or "DOWN" button to select setting programs. And then, press "ENTER" button to confirm the selection or ESC button to exit.

#### **Setting Programs:**

| Program | Description  | Selectable option                   |  |
|---------|--|-------------------------------------|--|
| 00      | Exit setting mode  | Escape  OD ESC                      |  |
|         | Output course priority   | Solar first                         | Solar energy provides power to the loads as first priority.  If solar energy is not sufficient to power all connected loads, battery energy will supply power to the loads at the same time.  Utility provides power to the loads only when any one condition happens:  - Solar energy is not available.  - Battery voltage drops to low-level warning voltage or the setting point in program 20. |
| 01      | Output source priority:  To configure load power source priority | Utility first (default)             | Utility will provide power to the loads as first priority. Solar and battery energy will provide power to the loads only when utility power is not available.  |
|         |  | SBU priority  O_I_SbU_              | Solar energy provides power to the loads as first priority.  If solar energy is not sufficient to power all connected loads, battery energy will supply power to the loads at the same time.  Utility provides power to the loads only when battery voltage drops to either low-level warning voltage or the setting point in program 20.  |
| 02      | AC input voltage range   | Appliances (default)  OPS  UPS  UPS | If selected, acceptable AC input voltage range will be within 90-280VAC.  If selected, acceptable AC input voltage range will be within 170-280VAC.  |

| 03 | Output voltage   | 220Vac 220°   | 230V (Default)  |
|----|--|---|---|
|    |  | 240Vac 240°   |   |
| 04 | Output frequency   | 50Hz (default)  | 60Hz<br>□Ч <u>60</u> <sub>Hz</sub>  |
| 05 | Power saving mode enable/disable   | Saving mode disable (default)  Saving mode enable  Saving mode enable | If disabled, no matter connected load is low or high, the on/off status of inverter output will not be effected.  If enabled, the output of inverter will be off when connected load is pretty low or not detected.   |
| 06 | Overload bypass: When enabled, the unit will transfer to line mode if overload occurs in battery mode. | Bypass disable (default)  | Bypass enable  06 69  |
| 07 | Auto restart when overload occurs  | Restart disable (default)   | Restart enable  |
| 08 | Auto restart when over temperature occurs  | Restart disable (default)   | Restart enable  |
| 10 | Charger source priority: To configure charger source priority  |   | working in Line, Standby or Fault n be programmed as below:  Solar energy will charge battery as first priority.  Utility will charge battery only when solar energy is not available.  Utility will charge battery as first priority.  Solar energy will charge battery only when utility power is not available.  Solar energy and utility will charge battery at the same time.  Solar energy will be the only charger source no matter utility is available or not. |

|    |   | If this inverter/charger is working in Battery mode or Power saving mode, only solar energy can charge battery. Solar energy will charge battery if it's available and sufficient. |  |
|----|---|--|--|
| 11 | Maximum charging current: To configure total charging current for solar and utility chargers. (Max. charging current = utility charging current + solar charging current) | 60A (default)  | Setting range is from 10A to 140A for 12V 1500VA and 24V 3000VA models, 10A to 70A for 48V 1500VA models, and 10A to 120A for 48V 3000VA models. |

## **Display Setting**

The LCD display information will be switched in turns by pressing "UP" or "DOWN" key. The selectable information is switched as below order: input voltage/output voltage, input frequency, PV voltage, charging current, output frequency, load percentage, load in VA, load in Watt, battery voltage/DC discharging current, main CPU Version and secondary CPU Version.

| Selectable information                                   | LCD display   |
|--|---|
| Selectable information                                   | Input Voltage=230V, output voltage=230V   |
| Input voltage/Output voltage<br>(Default Display Screen) | OUTPUT  AGM  OUTPUT  AGM  OUTPUT  100%  25%   |
| Input frequency and output frequency                     | Input frequency=50Hz, output frequency=50Hz  OUTPUT  OUTPUT  OUTPUT  AGM  OUTPUT  AGM  OUTPUT  AGM  OUTPUT  100%  25%   |
| Battery voltage and output voltage                       | Battery voltage=25.5V, output voltage=230V  |
| Battery voltage and load percentage                      | Battery voltage=25.5V, load percent=70%  BATT  V  AGM  V  25%   |
| Battery voltage and load in VA                           | When connected load is lower than 1kVA, load in VA will present xxxVA like below chart. Table 4 General Specifications

| INVERTER MODEL              | 1.5K-12V / 1.5K-48V / 3K-24V / 3K-48V        |  |  |
|-----------------------------|--|--|--|
| Safety Certification        | CE   |  |  |
| Operating Temperature Range | -20°C to 55°C                                |  |  |
| Storage temperature         | -30°C~ 60°C                                  |  |  |
| Humidity                    | 5% to 95% Relative Humidity (Non-condensing) |  |  |
| Dimension (DxWxH), mm       | 100 x 272 x 355                              |  |  |
| Net Weight, kg              | 7  |  |  |

## **TROUBLE SHOOTING**

| Problem   | LCD/LED/Buzzer  | Explanation / Possible cause   | What to do   |  |
|---|---|--|--|--|
| Unit shuts down automatically during startup process. | LCD/LEDs and buzzer will be active for 3 seconds and then complete off. | The battery voltage is too low (<1.91V/Cell)   | Re-charge battery.     Replace battery.  |  |
| No response after power on.                           | No indication.  | <ol> <li>The battery voltage is far too low. (&lt;1.4V/Cell)</li> <li>Battery polarity is connected reversed.</li> </ol> | <ol> <li>Check if batteries and the wiring are connected well.</li> <li>Re-charge battery.</li> <li>Replace battery.</li> </ol>  |  |
| Mains exist but the unit works in battery mode.       | Input voltage is displayed as 0 on the LCD and green LED is flashing.   | Input protector is tripped   | Check if AC breaker is tripped and AC wiring is connected well.  |  |
|   | Green LED is flashing.  | Insufficient quality of AC power.<br>(Shore or Generator)  | <ol> <li>Check if AC wires are too thin and/or too long.</li> <li>Check if generator (if applied) is working well or if input voltage range setting is correct. (UPS→Appliance)</li> </ol> |  |
|   | Green LED is flashing.  | Set "Solar First" or "SBU" as the priority of output source.   | Change output source priority to Utility first.  |  |
| Buzzer beeps<br>continuously and                      | Fault code 07   | Overload error. The inverter is overload 110% and time is up.  | Reduce the connected load by switching off some equipment.   |  |
|   | Fault code 05   | Output short circuited.  | Check if wiring is connected well and remove abnormal load.  |  |
|   | Fault code 02   | Internal temperature of inverter component is over 80°C.   | Check whether the air flow of<br>the unit is blocked or whether<br>the ambient temperature is<br>too high.   |  |
|   |   | Battery is over-charged.   | Return to repair center.   |  |
|   | Fault code 03   | The battery voltage is too high.   | Check if spec and quantity of batteries are meet requirements.   |  |
| red LED is on.  | Fault code 01   | Fan fault  | Replace the fan.   |  |
|   | Fault code 06/58  | Output abnormal.   | Reduce the connected load.     Return to repair center   |  |
|   | Fault code<br>08/09/53/57   | Internal components failed.  | Return to repair center.   |  |
|   | Fault code 51   | Over current or surge.   | Restart the unit, if the error happens again, please return  |  |
|   | Fault code 52   | Bus voltage is too low.  |  |  |
|   | Fault code 55   | Output voltage is unbalanced.  | to repair center.  |  |
|   | Fault code 56   | Battery detection circuit error.   | If the battery is connected well, please return to repair center.  |  |
